LINDA

VENEERS

'I want a perfect smile that doesn't look fake'

The treatment: Porcelain veneers are individually made and matched perfectly to your existing teeth so you can replace broken, missing or uneven teeth while retaining a natural smile that looks like it belongs to you. In consultation with the dentist, you will choose the length, colour and shape of your veneers. In most cases, your teeth will be prepared in advance and you will have temporary veneers fitted while the final ones are produced. The whole process typically takes around four weeks at a cost of £6,000-£7,000 for eight veneers.
